

ABSTRACT OF THE DISCLOSURE

[0047] A module support for forming a unitary display preferably from containers having outwardly extending access panels. The invention provides, in particular, a common module support for creating an array from two or more container modules. The invention may be advantageously utilized as a stand alone display for floor, shelf, and/or counter placement. The module support may also be hung on a wall or column using hanging means, e.g., double-sided adhesives, hook and loop fastening means, and hook and/or aperture means.
